How to find Reports and Maps – Your Guide to MP 77

INTRODUCTION

For the convenience of the user, this supplement to Miscellaneous Paper 77 consolidates in one volume information on 408 maps and reports released or published by the Mines and Minerals Division in 1985. For general introductory remarks, the user is referred to Miscellaneous Paper 77, "Index to Published Reports and Maps, 1891 to 1977". The publications released during the periods 1978 to 1980 and 1981 to 1983, and in 1984 are covered in the "1978 - 1980 Supplement", "1981 - 1983 Supplement" and "1984 Supplement" respectively.

As from the 1981 to 1983 supplement, the list of Open File Reports covers all reports released in this series. Also, for ease of reference, related Final Reports are indicated where applicable. However, it should be noted that in the Author, District, NTS and Township cross-indexes only the Open File Reports released in 1985 are referenced. For earlier years, see MP77 issue(s) covering the year(s) of interest.

A description of the current report and map series follows.

REPORT SERIES

- ARIP – Aggregate Resources Inventory Paper Series reports on the nature and extent of aggregate resources within a specific area and are accompanied by black and white or coloured maps illustrating areas of high extraction potential for planning purposes.
- GDIF – Geological Data Inventory Folio Series gives a comprehensive summary of all exploration data for an area covered by the Folio and is accompanied by location maps showing property boundaries, mineral occurences, drillholes, etc. Initiated in December 1982, it replaces the Data Series Maps.
- IMBP – Industrial Mineral Background Paper Series covers a variety of subjects related to industrial minerals and the background information needed by government agencies and aggregate industry companies in order to make economically viable decisions.
- MDC – Mineral Deposits Circular Series covers comprehensive inventory and geological characterization studies of specific types of mineral deposits, commodities, or resources, mainly on an Ontario-wide or regional basis.
- MP – Miscellaneous Paper Series may cover any geoscience subject. Reports are prepared for prompt public release and include annual publications such as Summary of Field Work, and The Resident Geologists' Report.
- MPBP – Mineral Policy Background Paper Series covers a variety of subjects each related to the background information needed by government agencies and companies to make in depth economic decisions on metallic mineral matters.
- OFR – Open File Report Series is used to release as soon as feasible and without editing, recent information on most of the fieldwork and other research activities. Many of the open files are edited at a later date and subsequently published in one of the final report series.
- OGP – Oil and Gas Paper Series reports on the exploration, drilling and production of oil and gas in Ontario.
- REPORT – Report Series describes the results of detailed geological surveys of specific areas and always includes one or more coloured maps.
- SPECIAL VOLUME – Special Volume Series is designed to publish comprehensive compilations on major topics of broad interest to the geoscience community. The first two volumes were released in 1984.
- STUDY – Study Series reports on new information or concepts of scientific merit not covered by other series publications. The content of this series varies but mainly covers larger areas than covered by the Report Series contents or discusses a specific subject.
- VIDEO CENSUS – Video Census Series is used to release annually a statistical computer analysis of the Mining Industry of Ontario including exploration and development work, and production.

MAP SERIES

- MAP – Coloured Geological Map Series includes detailed maps accompanying Reports and some Studies, and compilation maps at a scale of 1 inch equals 2 miles or smaller. The majority of Geophysical-Geochemical maps are produced in the 80 000 Series Maps introduced in 1979. Prior to the 80 000 Series, these maps were released in the P. number Map Series.
- P – P. Number Series Maps include maps on a variety of geoscience subjects. Black and white Preliminary Maps in this series are frequently proceeded by final color maps.

Full titles of the reports and maps are given in the publication index section of the supplement. In subsequent sections, Authors, Districts, NTS quadrangles and Townships are cross-referenced to relevant maps and reports by publication designator codes explained below:

SERVICES PROVIDED BY THE GEOSCIENCE DATA CENTRE

In addition to this index other useful publications are the periodically updated editions of:

- Index to Geoscience Data Recorded in Exploration Reports Submitted by the Mining Industry (Open File Report 5333)
- Ontario Mineral Deposit Inventory (Open File Report 5470)

Other services provided to the mining industry, geoscientists, prospectors, environmentalists and land use planners include:

DATA DEPOSITORIES

- EXPLORATION DATA

Exploration reports and drillhole logs received from the mining industry since the late 1940's are available for examination.

- MINERAL DEPOSIT DATA

Over 7,000 metallic and industrial mineral files have been assembled and contain information on location, geology, mineralization, development work and references.

COMPUTER RETRIEVAL SERVICES

- ONTARIO GEOSCIENCE INDEX DATABASE

Custom-tailored retrievals can be made from this bibliographic file covering:

1. all geoscience reports and maps published by the Ministry since 1891. Over 7,300 items are included.
2. all exploration reports submitted by the industry, totalling over 10,500 items.

Report and map references can be retrieved by geoscience keywords, author/company name, geographic area, year and category of report/map.

- MINERAL DEPOSIT INVENTORY DATABASE

This database provides rapid access to skeleton data, including references, on 5,500 occurrences and deposits based on any combination of location, commodity, development status and deposit name.

- ROCK CHEMICAL DATABASE (PETROCH)

Chemical data on some 12,200 rock samples collected by OGS geologists are retrievable by NTS quadrangle, broad rock category, and major oxides and trace elements.

INTRODUCTION

MISCELLANEOUS PAPER 77: INDEX TO PUBLISHED REPORTS AND MAPS, MINES AND MINERALS DIVISION, is a quick and easy-to-use reference tool, designed with you, the user, in mind.

Whether you are

- planning your next prospecting venture
- studying mineral resources distribution
- addressing environmental issues
- evaluating land use alternatives or
- interested in the geology and minerals around your house, cottage or farm

MP 77 is essential to you!

This guide will show you step-by-step how to zero-in on our publications that are of interest to you.

WHAT IS MP 77?

MP 77 is an index that itemizes and cross references thousands of reports, maps and other types of publications that the Mines and Minerals Division has published since 1891.

Without MP 77, your search for Ontario geoscience publications would not be as easy and simple.

WHAT SHOULD I KNOW ABOUT MP 77?

Each MP 77 is divided into two main parts

1) the PUBLICATION INDEX, catalogues all maps and reports released by the Mines and Minerals Division. Maps and reports are grouped together by publication type for easier access.

2) the AUTHOR, territorial DISTRICT, NATIONAL TOPOGRAPHIC SYSTEM (NTS), and TOWNSHIP INDEXES, cross-referenced to publications.

MP 77 can be accessed by using any of the AUTHOR, DISTRICT, NTS, TOWNSHIP or PUBLICATION indexes. Depending on your needs, MP 77 can be used to identify publications that cover a large area of the province or to zero-in on a specific area. The choice is yours.

Starting with the 1981-1983 Supplement, the OPEN FILE REPORTS Section in the PUBLICATION INDEX of MP 77 lists all OFR's issued since the introduction of this series in 1967. For each OFR that has subsequently been published in final format, this listing also includes final report title, number, year of publication and number (s) of accompanying map(s).

HOW MANY VOLUMES OF MP 77 ARE THERE?

As of March 1985, MP 77 consists of 4 volumes which cover the publication years 1891 to 1977, 1978-1980, 1981 to 1983, and 1984.

Each year a new supplement volume is added to the previous volumes. From time to time, volumes that cover a single publication year, e.g. 1981 and 1982, will be combined into one new volume, e.g. 1978-1980, for the user's convenience.

HOW DO I USE MP 77?

Step by step, the following examples will show how to zero-in on specific publications. The examples used in this guide are from the 1982 Supplement.

NTS INDEX EXAMPLE

What, if anything, was published on the Hemlo area?

Step 1: Refer to the Index to NTS Quadrangles in the introductory pages of MP 77. This figure, reproduced in this guide on page 6, indicates that the Hemlo area is located in 042C/12NW. The insets of the figure show how to zero-in on any area.

Step 2: Refer to NTS INDEX section in all volumes of MP 77 and see if any publications are cross referenced under 042C/12NW. In the example on page 7 of this guide, REPORT 0217 is identified.

Step 3: Refer to the PUBLICATION INDEX – REPORTS section in the pertinent volume of MP 77 for the full title of REPORT 0217. The example of the PUBLICATION INDEX – REPORTS section is given on page 8 of this guide.

The NTS areas cross referenced in MP 77 are related to the areal coverage of a publication. The larger the area, the larger is the NTS quadrangle indexed. The various areas covered by NTS quadrangles used in indexing are given in the following example.

Quadrangle	Area Latitude by Longitude
042	4° x 8°
042/NE	2° x 4°
042A	1° x 2°
042A/06	15′x 30′
042A/06SW	7½′x 15′

Starting with MP 77, 1978-1980 Supplement, general publications on Ontario are listed under "ONTARIO" at the beginning of the NTS INDEX.

TOWNSHIP INDEX EXAMPLE

What, if anything, was published on the Hemlo area which is located in Bomby Township?

Step 1: Refer to the TOWNSHIP INDEX in MP 77. In the example given on page 9 of this guide, REPORT 0217 is listed under BOMBY.

Step 2: For the full title of REPORT 0217, refer to the PUBLICATION INDEX - REPORTS section in MP 77. An example of this section is given on page 8 of this guide.

In those parts of northern Ontario where there are no geographic townships, access is only possible by the NTS INDEX.

AUTHOR INDEX EXAMPLE

T.L. Muir published a report on the Hemlo area. What is the report number and title?

Step 1: Refer to the AUTHOR INDEX in MP 77. In the example given on page 10 of this guide, 3 publications are listed under MUIR, T.L.: one preliminary map (P.02571 PRECAM) and two reports (REPORT 0217 and REPORT 0218)

Step 2: Turn to the PUBLICATION INDEX - REPORTS section in MP 77 for the full titles of the two reports. The example on page 8 of this guide indicates that REPORT 0217 is the report you are looking for.

DISTRICT INDEX

The steps in using the DISTRICT INDEX are similar to the AUTHOR INDEX example, except that you would use the DISTRICT INDEX in step 1. The territorial district boundaries are shown on the figure on page 6. The area south of Muskoka and Nipissing has been indexed under "Ontario Counties".

For the full meaning of publication designators used in the cross-indexes, see the introduction in MP 77. For your convenience, these designators are also tabulated below.

SERVICES PROVIDED BY THE GEOSCIENCE DATA CENTRE

In addition to this index other useful publications are the periodically updated editions of:

- Index to Geoscience Data Recorded in Exploration Reports Submitted by the Mining Industry (Open File Report 5333)
- Ontario Mineral Deposit Inventory (Open File Report 5470)

Other services provided to the mining industry, geoscientists, prospectors, environmentalists and land use planners include:

DATA DEPOSITORIES

- EXPLORATION DATA

Exploration reports and drillhole logs received from the mining industry since the late 1940's are available for examination.

- MINERAL DEPOSIT DATA

Over 7,000 metallic and industrial mineral files have been assembled and contain information on location, geology, mineralization, development work and references.

COMPUTER RETRIEVAL SERVICES

- ONTARIO GEOSCIENCE INDEX DATABASE

Custom-tailored retrievals can be made from this bibliographic file covering:

1. all geoscience reports and maps published by the Ministry since 1891. Over 7,300 items are included.
2. all exploration reports submitted by the industry, totalling over 10,500 items.

Report and map references can be retrieved by geoscience keywords, author/company name, geographic area, year and category of report/map.

- MINERAL DEPOSIT INVENTORY DATABASE

This database provides rapid access to skeleton data, including references, on 5,500 occurrences and deposits based on any combination of location, commodity, development status and deposit name.

- ROCK CHEMICAL DATABASE (PETROCH)

Chemical data on some 12,200 rock samples collected by OGS geologists are retrievable by NTS quadrangle, broad rock category, and major oxides and trace elements.
